

Overview of health and wellbeing

VÕRU COUNTY

This document summarizes selected data on health and wellbeing in the county. The aim is to present comparable and standardized health indicators. This information gives input to the regional planning of services for improving the health and wellbeing of inhabitants.

It is compiled by specialists of National Institute for Health Development, in collaboration with Ministry of Social Affairs and Statistics Estonia.

Additional information about the data used in the overview can be found online at: www.terviseinfo.ee/maakonnatervis

STRUCTURE OF VÕRU COUNTY'S POPULATION

Population: 35 063 (01.01.2011)

Percentage of Estonian population: 3%

Area: 2305,44 km²

Population density: 15,4 inhabitants per km²

County centre: Võru (13 078 inhabitants)

Municipalities: 13, incl. 1 urban and 12 rural

Economic activity: timber- and furniture manufacturing, food processing industry, metal- and plastic industry, light industry, construction, transport

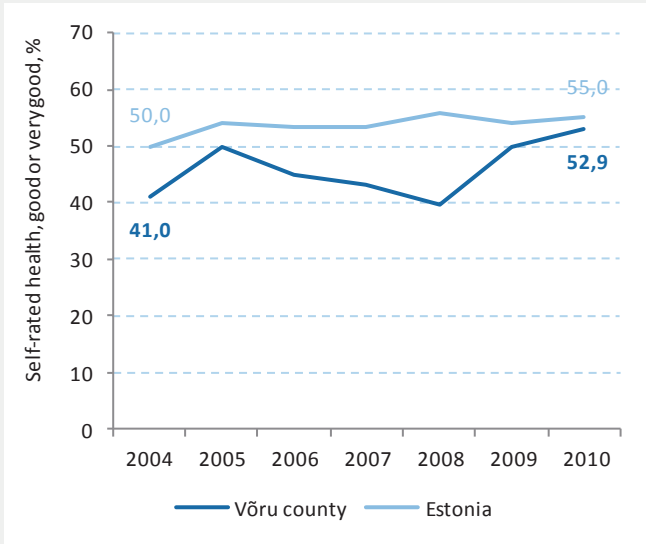

POSITIVE DEVELOPMENTS

- Early mortality rate (before the age of 65) has decreased during last years
- Below average incidence of cancer
- The lowest child mortality in Estonia (no registered deaths in past three years)
- The proportion of overweight schoolchildren has decreased during last few years
- Below average teenage pregnancy rate
- Below average incidence rate of hepatitis and sexually transmitted diseases
- Below average proportion of severe and fatal work-related accidents

CHALLENGES

- Highest proportion of elderly in Estonia
- Above average at-risk-of-poverty rate
- Below average life expectancy at birth
- Below average proportion of people who rate their health „good“ or „very good“
- Above average proportion of regular alcohol consumers
- Above average proportion of people with limitations of everyday activities due to health problems
- Above average burden of disease (incl. years of life lost due to both morbidity and mortality)
- Below average number of nursing care hospital beds

Administrative capacity of the municipalities

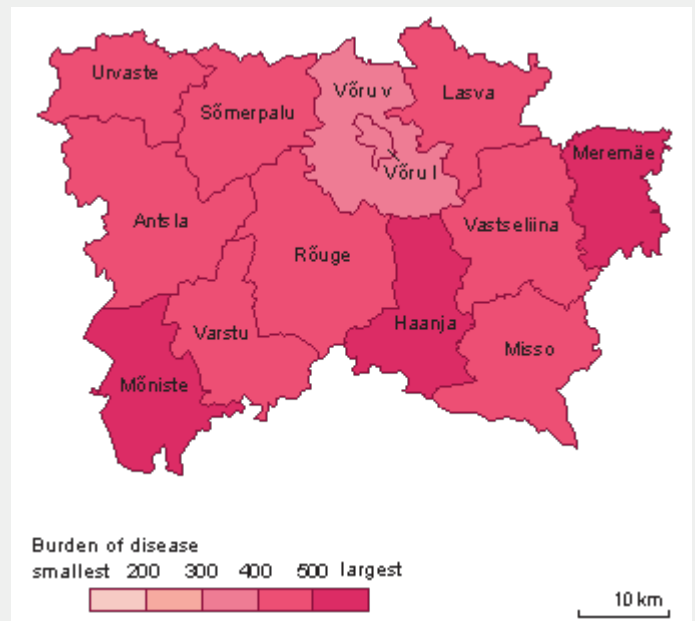

The index of administrative capacity is calculated using 26 indicators from six domains: population and area of the municipality, strength and diversity of local economy, wellbeing of inhabitants of the municipality, financial situation of the municipality, strength of the municipality's administration, and volume and diversity of the municipality's public services.

Administrative capacity of a municipality is expressed both in administrative ability and the general results of the administration on the territory of municipality. The map shows the index of administrative capacity in municipalities, average for the years 2006-2009.

Burden of disease in the municipalities

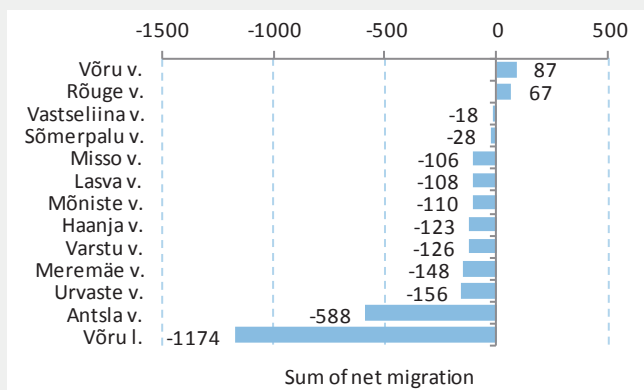

Burden of disease is calculated based on morbidity and mortality statistics; in addition the gravity of disease and people's age at the time of death are taken into account.

Burden of disease indicates how many years of life inhabitants have lost due to diseases and mortality. These are life years that people could have lived healthily, if there had not been the disease or death. Burden of disease is used as an indicator for comparing regions to each other or mapping the developments in time. The map shows years of life lost per 1000 inhabitants in 2006.
